DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicants have not yet defined the claimed term "elastomeric shear layer". One of ordinary skill in the art would expect the definition to be the same as set forth in applicants' prior application 10/081,571 now US Patent 6,769,465 B2: the run-flat insert is structurally supported (nonpneumatic) and the "elastomeric shear layer" is a layer of elastomer having a shear modulus of elasticity sufficiently lower than the longitudinal tensile modulus of elasticity of the first and second membranes such that, under an externally applied load, the elastomeric outer contacting portion deforms from essentially a circular shape to a flat shape while maintaining an essentially constant length of the membranes - relative displacement of the membranes occurs by shear in the shear layer (col. 2 lines 23-44); for purposes of this examination the claims will be understood to require this definition, however correction is required.

Allowable Subject Matter

3. Claims 1-27 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
4. The following is a statement of reasons for the indication of allowable subject matter: Sarkissian (4,153,095) discloses examples of the prior art run-flat insert mounted in a pneumatic tire and wheel rim assembly which are similar to the claimed run-flat insert mounted in a pneumatic tire and wheel rim assembly but without the claimed nonpneumatic structure and

reinforced annular band comprising the elastomeric shear layer and first and second membranes (see the embodiments of Figures 5 and 6). Rhyne et al. (6,769,465 B2) and US Patent Application Publications 2003/0121581 A1 and 2004/0187996 A1 disclose nonpneumatic tire structures similar to the claimed structure, including the claimed reinforced annular band comprising the elastomeric shear layer and first and second membranes, but do not disclose providing the nonpneumatic tire structure in the form of a run-flat insert mounted in a pneumatic tire and wheel rim assembly.
